

How to find length of ArrayList in Java

BY CHAITANYA SINGH | FILED UNDER: [JAVA COLLECTIONS](#)

By using `size()` method of `ArrayList` class we can easily **determine the size of the ArrayList**. This method returns the number of elements of [ArrayList](#).

```
public int size()
```

Example:

```
package beginnersbook.com;
import java.util.ArrayList;
public class Details
{
    public static void main(String [] args)
    {
        ArrayList<Integer> al=new ArrayList<Integer>();
        System.out.println("Initial size: "+al.size());
        al.add(1);
        al.add(13);
        al.add(45);
        al.add(44);
        al.add(99);
        System.out.println("Size after few additions: "+al.size());
        al.remove(1);
        al.remove(2);
        System.out.println("Size after remove operations: "+al.size());
        System.out.println("Final ArrayList: ");
        for(int num: al){
            System.out.println(num);
        }
    }
}
```

Output:

```
Initial size: 0
Size after few additions: 5
Size after remove operations: 3
Final ArrayList:
1
45
99
```
